

"Helping organizations find that lever for change and Improvement"

Workshop Outline

Delivered by the Author of the Book: **CYCLE TIME MANAGEMENT**
The Fast Track to Time-Based Productivity Improvement

Supervising in a LEAN THINKING and TIME-BASED driven Environment ...And learning how to apply the new techniques.

Overview

This experiential Workshop is focused on first line supervisors and operating managers and will show how organizations must change faster than their competition to survive economic pressures, but this will demand they improve their own business environment and that the supervisors role must also change!

Organizations will need to respond to the requirements of LEAN thinking and *Time-Based Business Strategies* and this will demand a more participative management approach and force new skills to be acquired by people who supervise (have control, corrective practice and influence on others) so that they demonstrate commitment and interest in the team approach to planning for change, decision making and problem solving. Also, that motivation skills utilized by the supervisor are participative and effective in this new environment.

This workshop will provide a brief introduction and raise the awareness for both LEAN THINKING and TIME-BASED driven initiatives and participants will be provided with a vision of the lean organization and gain experience of the paradigm-shifting tools and improvement processes needed to make the change in business practices.

The supervisory and leadership skills and tools required by those that supervise others will be outlined using an open forum approach so that the learning experience is driven by the gap that must be filled by the intent of the future business changes.

The workshop can be delivered in a modular format and can be customized to suit the specific organizations needs.

Workshop Topics

Introduction & Welcome.

Workshop Objectives/Expectations

Module 1 Introduction and Orientation to new improvement concepts

- Change: In The Global Marketplace
 - Customer Satisfaction...One of the driving forces for change
 - The illusion of change. What's next?
